The invention relates to a method of determining IgE levels in a body fluid sample, by contacting the sample with a reshaped human monoclonal antibody (RA) having a binding affinity about equal to that of the murine CDR-donor antibody TES-C21 produced by the cell line 11133. The antibodies are useful in the diagnosis, prophylaxis and treatment of allergy. This sequence represents the complementarity determining region (CDR) 2 from the light chain variable domain of a reshaped human antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human, NKG2D, NKG2D receptor complex; cancer; infectious disease; tumour; autcimmune disease; head; neck; stomach; oesophagus; colon; liver; ovary; intrahepatic bile duct; pancreas; lung; larynx; breast; uterus; cervix; prostate; kidney; testis; thyroid; bladder; brain; melanoma; mysloma; Farcoma; leukaemia; lymphoma; virus; bacterium; fungus; protozoan; DAP10; helminth; cytostatic; antimicrobial; immunomodulatory; 11B2D10; 6H7B7; 8G7C10; 6ESA7; 11B2D104,7; 6ESA74,11B2D104,7; 6ESA74,11B2D104,7; 6ESA74-7; P4-15; P5-2; P5-3; P5-9; P5-10; P5-11; P5-23; BB10xP4-3; BB10xP4-3; BA14; p53 tetramerisation domain; 3B10xP5-2; 3B10xP5-23.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequences given in AAR37599-604 represent the complementarity-
determining regions (CDRs) of a humanised antibody (Ab) which binds

CC specifically to human interleukin (II)-2 receptor (HIL2R). These CDRs

CC were derived from the murine anti-human IL-2 receptor monoclonal Ab (MAD)

CC HIL-2 to the IL-2 receptor on human T-cells. It also inhibits the human

CC IL-2 to the IL-2 receptor on human T-cells. It also inhibits the human

CC IL-2 to the IL-2 receptor on human T-cells. It also inhibits the human

CC IL-2 to the IL-2 receptor on human T-cells. It also inhibits the human

CC IL-2 to the IL-2 receptor on human T-cells. It also inhibits the human

CC IL-2 to the IL-2 receptor on human T-cells. It also inhibits the human

CC IL-2 to the IL-2 receptor on human T-cells. It also inhibits the human

CC IL-2 to the IL-2 receptor on human T-cells. It also also AAQ43226-32 and

AAQ43233-36). A human Ab with high levels of amino acid sequence homology

CC to the murine sequence cans selected and the framework to design

Several kinds of the humanised B-B10 V region (see also AAQ43244-45). The

DNA sequence coding this humanised B-B10 was synthesised and a plasmid

expressing humanised B-B10 was constructed. (Updated on 25-MAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Humanised antibody comprising - CDR region of mouse MAB B-B10 specific for IL-2 receptor useful for treating carcinoma expressing IL-2 receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Diagnosis, IgE; immunoglobulin; body fluid; human; monoclonal antibody;

The invention relates to a multifunctional polypeptide comprising a domain with a binding site that specifically recognises an extracellular group in the NG2D receptor complex and a second domain which functions as a receptor or ligand. The polypeptide and its associated controlled in the properties and its associated polymolectide are used for the preparation of a pharmaceutical composition. The cancer may be a tumour of the head and neck, stomach, conditions. The cancer may be a tumour of the head and neck, stomach, cosophagus, colon, liver, intrahepatic bile ducts, pancreas, lung, larged are relative, breast, oversy, uterus, cervix, prostate, kidney, testis, thyroid, bladder or brain, or a melanoma, myeloma, sarcoma, leukaemia or lymphoma. The infectious diseases can be caused by viruses, bacteria, fungi, protocoa or helminths. The autoimmune diseases include multiple clerosis, Grave's disease, ankylosing spondylitis, acute anterior uveitis, Goodpasture's syndrome, myasthenia gravis, insulin-dependent autoimmune hepatitis. Squences AM172810-AM172875 represent the NKG2D receptor and the polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, NKG2D; NKG2D receptor complex; cancer; infectious disease; tumour; autoimmune disease; head; neck; stomach; oesophagus; colon; liver; ovary; intrahepatic bile duct; pancreas; lung; larynx; breast; uterns; cervix; prostate; kidney; testis; thyroid; bladder; brain; melanoma; myeloma; Fv sarcoma; lenkaemia; lymphoma; virus; bacterium; fungus; protozoan; DAP10; helminth; cytostatic; antimicrobial; immunomodulatory; ll82D10; 6H7B7; 8G7C10; 6E5A7; 11B2D10x4-7; 8G7C10x4-7; 8G5A7x4-7; P4-2; P4-3; P4-14; P4-15; P5-2; P5-3; P5-9; P5-10; P5-11; P5-23; 3B10xP4-13; B4-14; p5-3 tetramerisation domain; 3B10xP5-2; 3B10xP5-23.

The invention relates to a multifunctional polypeptide comprising a domain with a binding site that specifically recognises an extracellular group of the NK3Dz receptor complex and a second domain which functions as a receptor or ligand. The polypeptide and its associated composition for the treatment of cancer, infections and/or autoimmune conditions. The cancer may be a tumour of the head and neck, stomach, composition for the treatment of cancer, infections and/or autoimmune conditions. The cancer may be a tumour of the head and neck, stomach, cosphagus, colon, liver, intrahepatic bile ducts, pancreas, lung, bladder or brain, or a melanoma, myeloma, sarcoma, leukaemia or lymphoma. The infectious diseases can be caused by viruses, bacteria, fungi, bladder or brain, or a melanoma, myeloma, sarcoma, leukaemia or lymphoma. The infectious disease, autoimmune diseases include multiple sclerosis, drave's disease, autoimenne diseases include multiple sclerosis, drave's disease, antwicklesing spondylitis, acute anterior uveitis, Goodpasture's syndrome, myasthenia gravis, insulin-dependent autoimmune hepatitis. Squances, ANUZSEO-ANUZSEO represent the NKG2D autoimmune hepatitis. Squances ANUZSEO-ANUZSEO represent the NKG2D creceptor and the polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      'note= "light chain complementarity determining region 1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  'note= "light chain complementarity determining region 2"

The present sequence comprises a summary of the complementarity determining regions (CDRs) of the light chain and heavy chain of the arboric lymphocytic leukaemia (CLLs Specific rabbit serv antibody Elecantic Lymphocytic leukaemia (CLLs Specific rabbit serv antibody Elecantic Sequence. Rabbit scrv antibodies (see ABB79657-81) for B-CLL-specific sequence. Rabbit scrv antibodies (see ABB79657-81) for B-CLL-specific cell surface panning. The invention provides a CLL line, CLL-AAT, derived from a B-CLL primary line without immortalisation by Epstein-Barr virus. The cell line is used to generate antibodies useful in the diagnosis and/or treatment of CLL. Antibodies derived from recombinant libraries may be selected using CLL-AAT as bait to isolate antibodies on the basis of specificity. Single chain antibodies are of particular use as they remain stable in the cytoplasm and retain intracellular binding activity. The binding of the present scrv antibody to primary human cells and cell coll mines was determined by whole cell ELISA as follows: CLL (primary thumunes and CLL-AAT cell line) ++; normal, primary human B lymphocytes, +; non-fody human erythnolukaemia cell line RL -; Burkitt's lymphoma cell line Ramos, and human erythnolukaemia cell line TF-1, - A short linker separates the VL and VH regions of the scrv. The antigen recognised by this scrv was CD23, determined by immunoprecipitation and mass spectrometry

```
The present sequence comprises a summary of the complementarity determining regions (CDRs) of the light chain and heavy chain of the chronic lymphocytic leukaamia (CLL) specific rabbit serv antibody F2d. Antibody regions separating the CDRs in the scrv are not given in the sequence. Rabbit scrv antibodies (see ABB79657-81) for B-CLL-specific cell surface antigens were selected using antibody phage display and cell surface antigens were selected using antibody phage display and cell surface panning. The invention provides a CLL line, CLL-AAT, derived from a B-CLL primary line without immortalisation by Epstein-Barr virus. The cell line is used to generate antibodies useful in the diagnosis and/or treatment of CLL. Antibodies derived from recombinant libraries may be selected using CLL-AAT as bait to isolate antibodies on the basis of specificity. Single chain antibodies are of particular use as they remain standing of the present scrv antibodies are of particular binding activity. The binding of the present scrv antibody to primary human cells and cell lines was determined by whole cell BLISA as follows: CLL (primary tumours and CLL-AAT cell line) ++; normal, primary human B lymphocytes, +; non-Hodgkin's lymphoma cell line RL, -; Burkitt's lymphoma cell line Ramos, -; and human erythroleukaemia cell line FP-1, -. A short linker separates

The present sequence represents the light chain variable domain of murine monoclonal antibody 14E1. This antibody is active against the human epidermal growth factor receptor (EGF-R). The sequence is used to construct a single-chain polypeptide (soFv) that has binding affinity for an EGF-R. The scrv comprises two segments which contain the binding parts of the heavy and light chain variable domains of the monoclonal antibody 14E1. The scrvs of the invention are used to treat carcinomas (gliomas, melanomas and tumours) that overexpress EGF-R, specifically EGF-RvIII, relative to normal cells, particularly by blocking proliferation of such cells by preventing receptor activation. They can also be used for in vitro purging. When the scFV is appropriately labelled, it can be used diagnostically to image cells that express EGF-R, specifically breast
                                                                                                                                                                                                                                                                                                                    New single chain polypeptide that binds to epidermal growth factor receptor - is derived from antibody 14E, used for treatment and diagnosis of cancer or other cell proliferative diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     immunosuppression; tissue transplantation; graft; L chain; V region;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This polypeptide comprises the light chain variable region of murine monoclonal antibody (MAb) 48-127. This MAb recognises an epitope of gp54 antigen (trop-2), a cancer marker expressed at the surface of bladder, breast, uterine and prostate cancers. MAb 48-127 (IgG1) reacts with a majority of human bladder cell lines and with human breast carcinoma cell lines. The invention relates to novel single chain antibody (scFv) molecules, including a 48-127 scFv (see AAM2679) that comprises the 48-127 VH and VL chains joined via a linker. Such scFvs can be used to detect cancers and micromecastases, e.g. bladder, prostate, breast or uterine cervix cancers, and may be linked to specific toxins for use in cancer therapy. The scFvs are not immunogenic and are distributed and captured by 9P45-bearing target cells more quickly than conventional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New recombinant antibodies to gp54 antigen - used for the detection of cancers and metastases and for therapy of cancers expressing the gp54
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         treatment; carcinoma;

                                                                                                                                                                                                                                                                         This sequence is the light chain variable region of a preferred anti-IL2R beta monoclonal antibody for use in the claimed synergistic composition. The anti-IL2R beta antibody is used with at least one anti-CD4 antibody. Individually the antibody served with inhibiting and when used together their immunosuppressive properties are improved; they synergistically inhibit T-helper cell proliferation to effectively inhibit transplant rejection at low doses without significantly reducing the general immune response. See AAQ36607-C36616. (Updated on 10-MAR-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                   Synergistic antibody compsn. for use as immunosuppressant - comprises monoclonal anti-CD4 antibodies and monoclonal anti-IL2R alpha- or anti-IL2R beta antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Complementarity-determining region; CDR; humanised; antibody; hIL2R; human; interfleukhn; IL-2; receptor; mutine; anti-human; Ab; T-cell; monoclonal antibody; B-l0; mixed lymphocyte reaction; variable; V; region; PCR; framework; plasmid; heavy; H; light; L.

The sequences given in AAR37609-10 represent the heavy (H) and light (L) chain variable (V) regions of the murine anti-human IL-2 receptor monoclonal antibody (MAD) B-10, respectively. This MAD was used in the construction of a humanised antibody (AD) which binds specifically to human interleukin (IL)-2 receptor (HIL2R). The complementarity-catermining regions (CDRs) for the hIL2R MAD were derived from B-110 (see also AAR37599-04). The hIL2R MAD is antagonistic to the binding of IL-2 to the IL-2 receptor on human T-cells. It also inhibits the human mixed lymphocyte reaction. The CDNA encoding the variable (V) region of ILe B-110 V region CDR and a sequence (see also AAQ43226-32 and AAQ43233-36) A human Ab with high levels of amino acid sequence homology to the murine sequence was selected and the framework of this Ab was bound with this of the humanised B-110 V region. The DNA sequence coding this humanised B-110 W region. The DNA sequence coding this humanised B-110 was synthesised and a plasmid expressing humanised B-110 was constructed. (Updated on 25-MAR-2003 to correct PN field.)
                                       Humanised antibody comprising - CDR region of mouse MAB B-B10 specific for IL-2 receptor useful for treating carcinoma expressing IL-2 receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

LOFE., Hong W.;

Todgi and exists in a complex with GTC-90 and IdlBp.";

Golgi and exists in a complex with GTC-90 and IdlBp.";

J. FINCTICAN: Involved in ER-6019; Lanssport.

C. I- SUBUNIT: Component of the conserved oligomeric Golgi complex which is composed of stipt different subunits and is required for normal Golgi morphology and localization (By similarity).

C. SUBCELLUIAR LOCATION: Golgi. Associated with the peripheral membrane of cisfmedial cisternae.

C. SUBCELLUIAR LOCATION: Golgi. Associated with highest levels in pancreas and testis and lowest levels in lung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. Biol. Chem. 265:3738-3743(1990).
-!- FUNCTION: THIS PROTEASE IS SPECIFIC FOR IMMUNOGLOBULIN A.
-!- CATALYTIC ACTIVITY: Cleavage of immunoglobulin A molecules at certain Pro-|-Xaa bonds in the hinge region. No small molecule
                                                                                                                                                                                                                                                                                                                                                                                                                       01-MAR-1989 (Rel. 10, Created)

WHORGER P., Mancker P., Mancker P., Mancker P., Mancker P., Mancker P., Sorokin A.; Wincker P., Ehrlich S.D., Sorokin A.; "The complete genome sequence of the lactic acid bacterium Lactococcus acts sep. lactis ILI403 "The complete Res. 11:731-753(2001).
-! FUNCTION: Efflux transporter for a variety of amphiphilic cationic compounds, including antibiotics (By similarity).
-! SUBUNIT: Honodimer (Potential).
-! SUBUNIT: Honodimer (Potential).
-! SIMILARITY: Belongs to the ABC transporter family. MDR subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Lactococcus lactis (subsp. lactis) (Streptococcus lactis).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

REDLINEST TEMPERS TOWN THIRD HYPERVARIABLE REGIONS OF THIS CHAIN ANTH THOSE OF THE HUMAN POM V-III KAPPA CHAIN, WHICH IT SHARES CERTAIN IDIOTYPIC DETERMINATS.

CHAIN ARE IDENTICAL WITH THOSE OF THE HUMAN POM V-III KAPPA CHAIN, WITH WHICH IT SHARES CERTAIN IDIOTYPIC DETERMINATS.

CHAIN ARE IDENTICAL WITH THOSE OF THE HUMAN POM V-III KAPPA CHAIN, STANDARD THIS CHAIN WAS ISOLATED FROM AN IGM WITH ANTI-GAMMA GLOBULIN ACTIVITY.

Brain Res. Mol. Brain Res. 94:85-95(2001).
-!- FUNCTION: Cadherins are calcium dependent cell adhesion proteins.
- They preferentially interact with themselves in a homophilic manner in connecting cells. Cadherin 23 may function as hair bundle organizer perhaps by cross-linking the stereocilia (By

Isosus SPECIFICITY: In adult animals relatively high levels of expression are found in testis, skeletal muscle, heart, eye and thymus, and lower expression in kidney, lung and brain. Found in the sensory hair cells of the inner ear.

NalsaAss Defects in CDH23 are the cause of waltzer (v) phenotype. Waltzer mice are characterized by deafness and vestibular dysfunction due to degeneration of the neuroepithelium within the
"Genomic structure, alternative splice forms and normal and mutant alleles of cadherin 23 (Cdh23).";
Gene 281:31.41(2001).
-!- FUNCTION: Cadherins are calcium dependent cell adhesion proteins.
They preferentially interact with themselves in a homophilic manner in connecting cells. Cadherin 23 may function as hair bundle organizer perhaps by cross-linking the stereocilia.
-!- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).
-!- ALTERNATIVE PRODUCTS:
EVent-Alternative splicing; Named isoforms=2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cell adhesion; Glycoprotein; Transmembrane; Calcium-binding; Repeat; Signal; Multigene family; Alternative splicing; Deafness; Polymorphism; Disease mutation.

Construction of a contiguous 874-kb sequence of the Escherichia coli

"Kl2 genome corresponding to 50.0-68 8 min on the linkage map and

TRI2 genome corresponding to 50.0-68,8 min on the linkage map and

II nalysis of its sequence features.";

DNA Res. 4:91-113(1997).

-I- FUNCTION: INVOLVED IN A MULTICOMPONENT BINDING-PROTEIN-DEPENDENT

TRANSPORT SYSTEM FOR GIYCINE BETAINE/L-PROLINE.

-I- SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane.

System permease family. CysTW subfamily.

j Patent No. 587677

GENERAL INFORMATION;

APPLICANT: SHIMAWURA, TOSHIRO

APPLICANT: HAMUNO, JUNJI

TILLE OF INVENTION: POLYPEPTIDES CAPABLE OF BINDING TO HEAVY

TITLE OF INVENTION: CHAINS OF IL-2 RECEPTORS

NUMBER OF SEQUENCES: 4

CORRESPONDENCE ADDRESS: 4

CORRESPONDENCE ADDRESS: ADDRESS: ADDRESSE: P.C.

STREET: 1755 S. Jefferson Davis Highway, Suite 400

CITY: Alington

STATE: Virginia

COUNTRY: U.S.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 240;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COMPUTER READABLE FORM:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 2, Ar

Patent No. 563761

GENERAL INFORMATION:
APPLICANT: QUEEN, Cary L.
APPLICANT: SCHNEIDER, William P.
APPLICANT: LANDOLFI, Nicholas F.
APPLICANT: SELICK, Harold E.
TITLE OF INVENTION: IMPROVED HUMANIZED IMMUNOCLOBLINS
NUMBER OF SEQUENCES: 113
CORRESPONDENCE ADDRESS:
ADDRESSEE: TOwnsend and Townsend Khourie and Crew
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               COMPUTER: REALBLE FORM disk MEDIUM TYPE: Floppy disk COMPUTER: IBM PC compatible OPERATING SYSTEM: PC-DOS/MS-DOS SOFTWARE: Patentin Release #1.0, Version #1.25 CURRENT APPLICATION DATA: APPLICATION NUMBER: US/08/474,040 FILING DATE: 07-JUN-1995 CLASSIPICATION: 536 PRIOR APPLICATION NUMBER: US 07/634,278 FILING DATE: 12-DEC-1990 APPLICATION NUMBER: US 07/530,274 FILING DATE: 12-DEC-1990 APPLICATION NUMBER: US 07/310,252 FILING DATE: 13-FEB-1990 FRIOR APPLICATION NUMBER: US 07/290,975 FILING DATE: 13-PEC-1989 FRIOR APPLICATION NUMBER: US 07/290,975 FILING DATE: 28-DEC-1980 FRIOR APPLICATION NUMBER: US 07/290,975 FILING DATE: 28-DEC-1980 ATCORNEY/AGENT INFORMATION: NAME: Smith, William M REGISTRATION NUMBER: 11823-002600 TELECOMMUNICATION INPORMATION: TELECOMMUNICATIO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NESULI 17-721A-55

Sequence 55, Application US/08127721A

Patent No. 6066718

GENERAL INFORMATION:

APPLICANT: Hardman, No. 6066718man

APPLICANT: Saldanha, Joser, Frank

TITLE OF INVENTION: Reshaped monoclonal antibodies against an

TITLE OF INVENTION: immunoglobulin isotype

NUMBER OF SEQUENCES: 55

CORRESPONDENCE ADDRESS:

ADDRESSEE: No. 6066718artis Patent and Trademark Department

STREET: S9 Route 10

CITY: East Hanover

STATE: New Jersey
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ..

Treatment of human tumors, using a combination of radiation and a non-radiolabeled protein receptor tyrosine kinase inhibitor.

Disclosure; Page 15; 31pp; English.

This sequence is the hypervariable region CDR3 (complementarity determining region 3) of the light chain of a single chain antibody derived from the murine antibody 25. The invention relates to a method for inhibiting the growth of tumours in human patients by treating with an effective amount of a combination of radiation and a non-radiolabelled protein receptor tyrosine kinase (PRTX) inhibitor, the overexpression of which can lead to tumourigenesis. The method can be used in the treatment of tumours of e.g. breast, lung, colon, kidney, bladder, head and neck, ovary, prostate or brain. The administration of a suitable antibody to

                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a method for inhibiting the growth of factactory tumours that are stimulated by a ligand of epidermal growth factor receptor (EGFR) in human patients. The method involves treating the patient with a combination of EGFR/human EGF-1 (HER1) antagonist, optionally with a chemotherapeutic agent or radiation. The antagonist can be for example a chimeric anti-EGFR monoclonal antibody, C25. The EGFR/HER1 antagonist is useful for inhibiting the growth of refractory tumours such as tumours of breast, heart, lung, small intestine, colon, spinen, kidney, bladder, head and neck, ovary, prostate, brain, pancreas, skin, bone, bone marrow, blood, thymus, uterus, testicles, cervix and liver, preferably squamous cell carcinomas. The present sequence represents the light chain variable region complementarily determining region 3 amino acid sequence of the chimeric anti-EGFR monoclonal antibody C225 which is used in an example illustrating the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Epidermal growth factor receptor/human epidermal growth factor receptor-1 antagonist for inhibiting the growth of refractory tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Refractory tumour growth inhibition, epidermal growth factor receptor, BGFR antagonist, cancer, squamous cell carcinoma, anti-EGFR antibody; complementarity determining region, CDR.

The method involves administering an antibody or a defective receptor that is an antagonist of a member of the EGF receptor family, or a combination of the antagonist and phototherapy. Chemotherapeutic agent or radiation therapy. The antibody used in the method of the invention acts as an epidermal phosphorylation. The method of the invention is useful for treating a mammal with hyperproliferative disease such as psoriasis, actinic strandard by a ligand of a member of the EGF family of receptor. This sequence represents the murine anti-EGF 255 antibody light chain (LH) hypervariable region (CDR3) used as an inhibitor of EGFR in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treating a mammal with hyperproliferative disease especially psoriasis, stimulated by ligand of member of epidermal growth factor family of receptors, by administering antagonist of the receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel method for treating a mammal with
                                                            Mouse, light chain; antibody; hyperproliferative disease; epidermal growth factor; EGF; psoriasis; actinic keratosis; seborrheic keratosis; warts; keloid scars; eczema; 255 antibody; hypervariable region; CDR3; EGFR inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the kappa light chain variable region of the reshaped human monoclonal antibody (MAD) H225, 225RKA. The MAD is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytocoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Chimeric and humanised versions of anti-EGF receptor antibody 225 for inhibiting tumour growth, esp. of late stage prostatic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100.0%; Score 56; DB 2; Length 107; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is the kappa light chain variable region of the reshaped human monoclonal antibody (MAD) H325, 225RA, The MAD is specific for the human epidermal growth factor (BGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                              Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the kappa light chain variable region of the murine monoclonal antibody (MAb) M225, which is specific for the human epidermal growth factor (EGF) receptor. The MAb, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the kappa light chain variable region of the chimeric monoclonal antibody (MAD) C225, with the modified leader sequence from the kappa light chain of L7/CL MAD. C225 is specific for the human epidermal growth factor (EGF) receptor. C225, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage special tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

scrv(225) (AAW05133) comprises the single-chain binding region of murine monoclonal antibody 225, which is specific for the human epidermal growth factor receptor. It is encoded by plasmid pWW152-225 (see also AAT42033), constructed by cloning MAD 225 whand VL region CDNAs into plasmid pWM152. Novel bivalent proteins (see also AAW05134-44), some of them including scFv(225) and an effector e.g. cytotoxin, can be produced in bacterial host cells, and are useful as antitumour agents
prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bivalent fusion proteins that bind epidermal growth factor receptor canalogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.
                                                                                                                                                                                                                                                                                                                                                                                   EGF;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           scFv(225)-ETA (AAW05135) comprises the single-chain binding region (see also AAW05133) of murine monoclonal antibody 225, which is specific for human epidermal growth factor receptor, joined to extoxin A (ETA). It is encoded by plasmid pSW020-225 (see also AAT42035) obtd. by ligating an scFv(225) gene (AAT42033) into plasmid pSW200 contg. the Pseudomonas eruginose PAK ETA gene. The construct can be used to produce novel bivalent fusion proteins (see also AAW05136-44) in bacterial host cells, for use as antitumour agents
                                                                                                                                                                                                                                                   Single chain antibody; scFv; monoclonal antibody; MAb; EGF; epidermal growth factor; receptor; plasmid pSW202-225; cancer; therapy; antitumour; exotoxin A; ETA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        or

scrv2(225/FRP5)-STA (AAW05140) comprises the single-chain binding region of murine monoclonal antibody 225 (specific for human epidermal growth actor receptor, see also AAW0513) joined to portions of exotoxin A from Pseudomonas aeruginosa and to the single-chain binding region of murine monoclonal antibody FRP5 (specific for human epidermal growth factor receptor erbB-2, see also AAW05134). It is encoded by plasmid pMS28-225-5 (AAT42040). This plasmid can be utilised in the prodn. Of the bivalent fusion protein in bacterial (egg. E. coli) host cells. Such fusion proteins (see also AAW05138-44) are useful as antitumour agents
                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                               Single chain antibody; scFv; monoclonal antibody; MAb; EGF; erbB-2; epidermal growth factor; receptor; plasmid pMS238-5-225; cancer; exotoxin A; ETA; antitumour.

                                                                                                                                                                                                                                                                                                         scFv2(FRP5/225)-ETA (AAW05139) comprises the single-chain binding region of murine monoclonal antibody FRP5 (specific for human epidermal growth factor receptor exbB-2, see also AAW05134) joined to portions of exotoxin A from Pseudomonas aeruginosa and to the single-chain binding region of murine monoclonal antibody 225 (specific for human epidermal growth factor receptor, see also AAW05131). It is encoded by plasmid pMS238-5-225 (AAT42039). This plasmid can be utilised in the prodn. of the bivalent fusion protein in bacterial (sep. E. coli) host cells. Such fusion proteins (see also AAW05138-44) are useful as antitumour agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                 Bivalent fusion proteins that bind epidermal growth factor receptor analogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Single chain antibody, scFv; monoclonal antibody; MAb; EGF; erbB-2; epidermal growth factor; receptor; plasmid pMS240-5-225; cancer; exotoxin A; ETA; antitumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .,

This sequence is the light chain variable region of a preferred anti-IL2R beta monocolonal antibody for use in the claimed synergistic composition. The anti-IL2R beta antibody is used with at least one anti-CD4 antibody. Individually the antibodies are strongly inhibiting and when used together their immunosuppressive properties are improved; they synergistically inhibit T-helper cell proliferation to effectively inhibit transplant rejection at low doses without significantly reducing the general immune response. See AAQ36607-Q36616. (Updated on 10-MAR-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PN field.)
